

How to install Summit

- 1) Download the latest summit install package.
See <https://esynergyglobal.com/whats-new>
- 2) NET Framework 3.5 package is needed to install and run EnergyGauge Summit.
Unlike older versions of Windows, recent versions do not include it by default. So first, check that your PC has the .NET Framework 3.5 installed.
- 3) If not, first download and install it from the link.
<https://www.microsoft.com/en-us/download/details.aspx?id=25150>
To install .NET Framework 3.5, just double-click the downloaded file.

To check if .NET 3.5 is installed:

Windows Features (Easiest Method)

This is the most direct way to see if it is currently enabled on your system.

- *In your search taskbar search window, type “optionalfeatures”, and press **Enter**.*
- *In the **Windows Features** window, look for **.NET Framework 3.5 (includes .NET 2.0 and 3.0)**.*
- *If the checkbox is **filled (black square or checkmark)**, it is installed and enabled.*

- 4) Double-click the downloaded summit install package (usually named EnergyGaugeSetup.exe) to install.
